

# Mac OS 10.6

## Step 1:

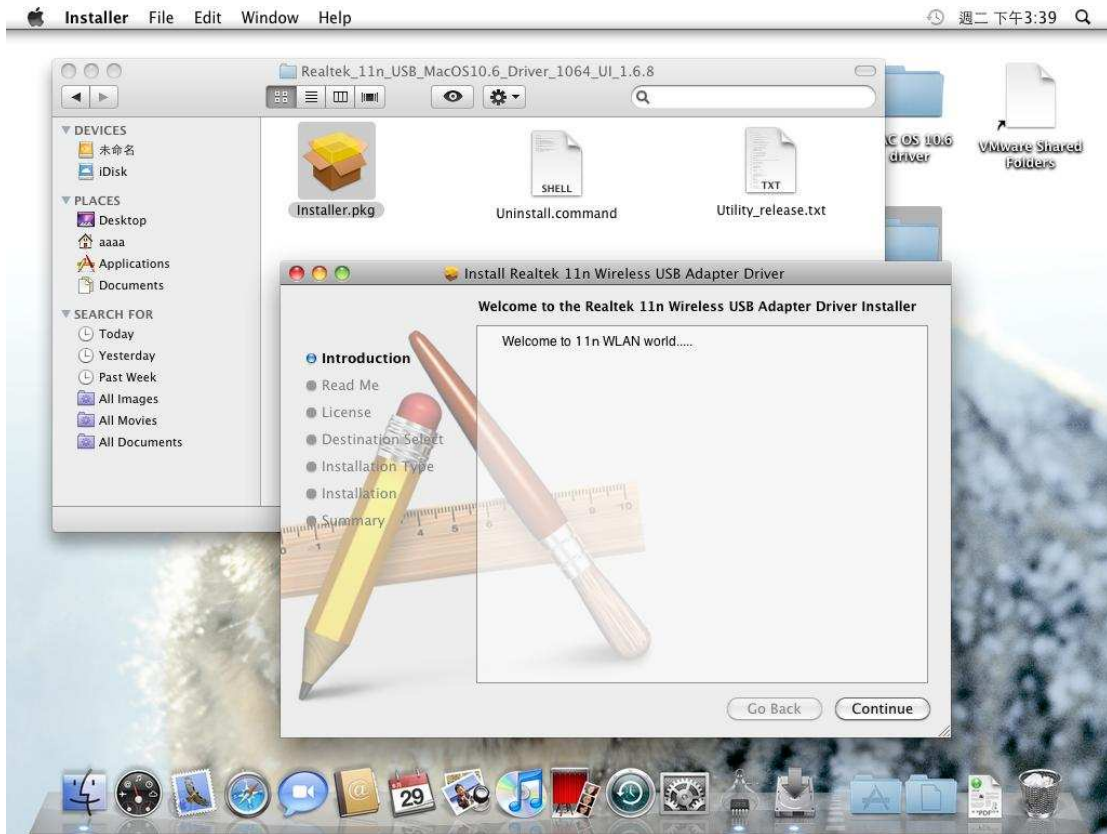

**Make sure your Mac OS X version is above 10.6, and version under 10.5 is not been installed.**

## Step 2:

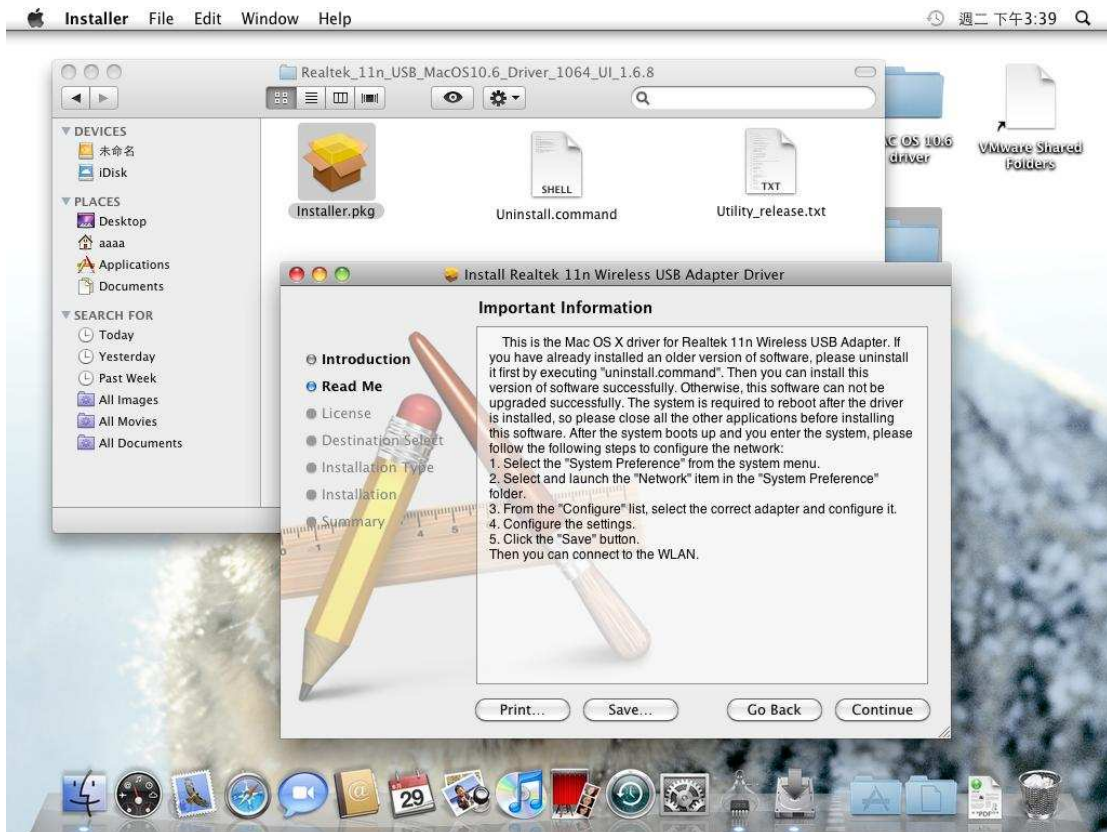

**Open the Wireless Driver, then click “installer.pkg”. It will show Driver Install Flow Guide.**

**Click the “continue” button**

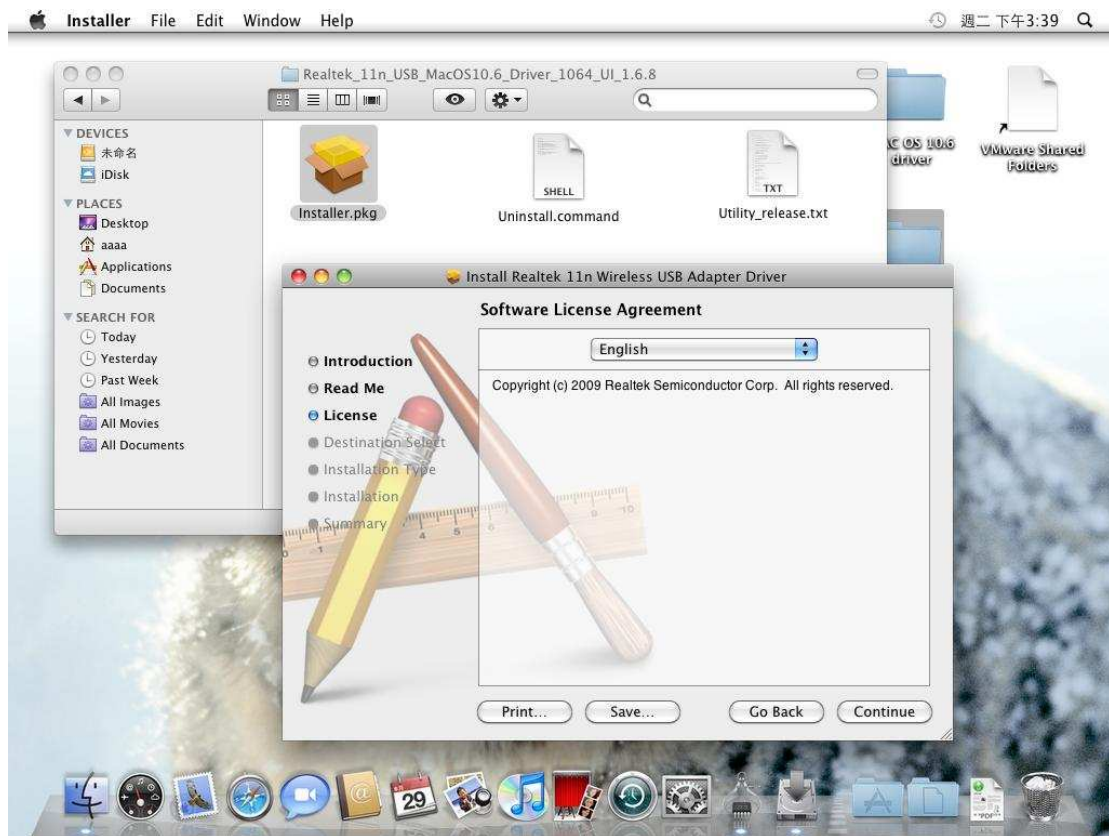

### Step 3:

Click “Continue” button.

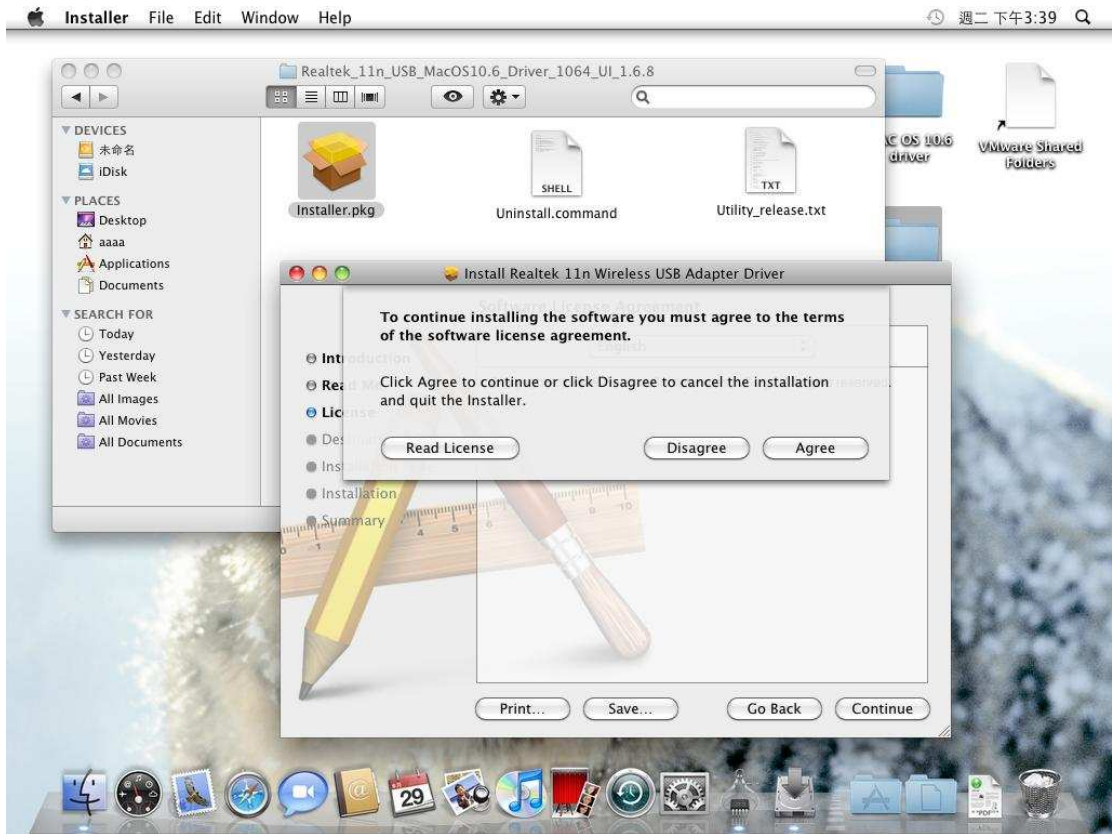

## Step 4:

Click “Continue” button.

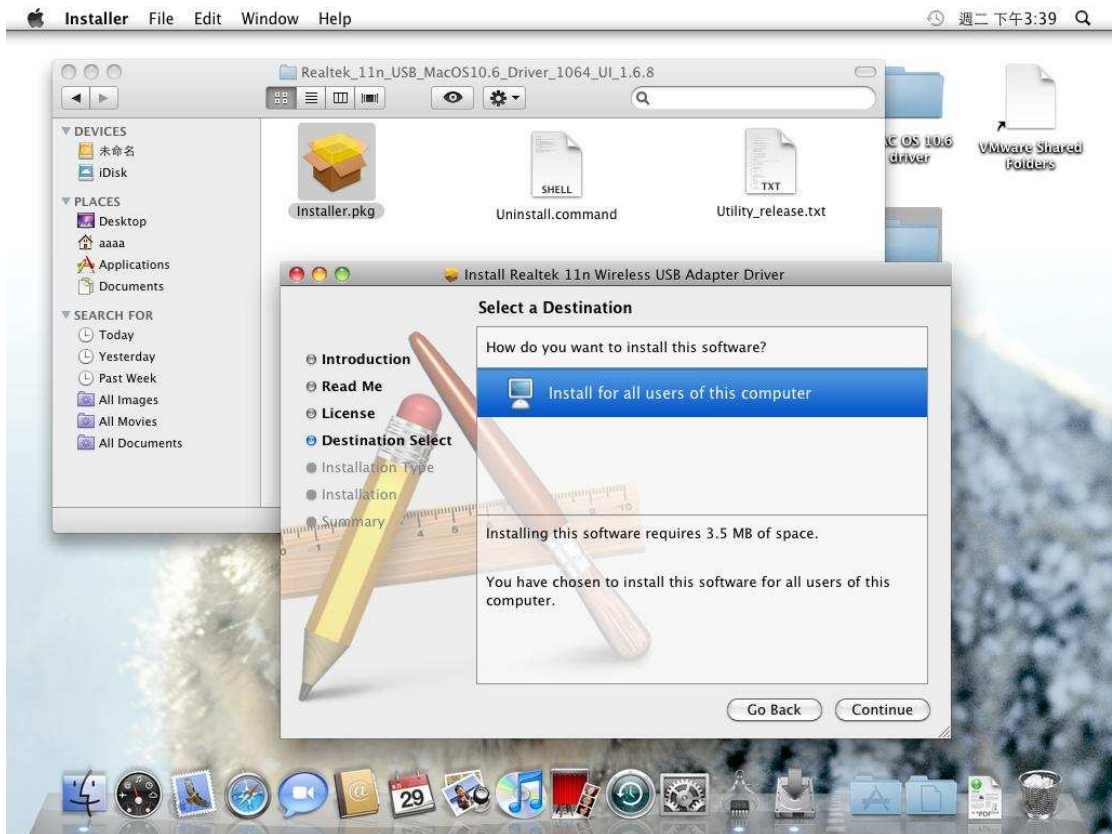

## Step 5:

Click “Agree” button.

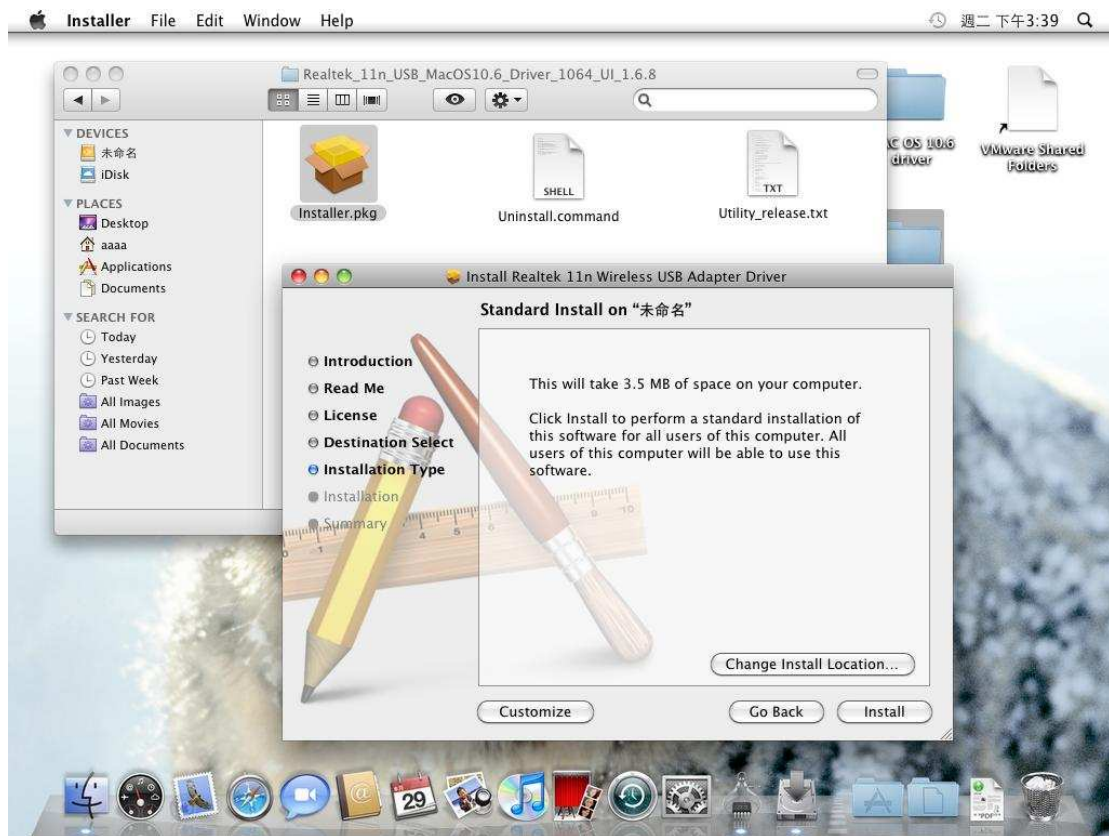

**Step 6:**  
**Click "Continue" button.**

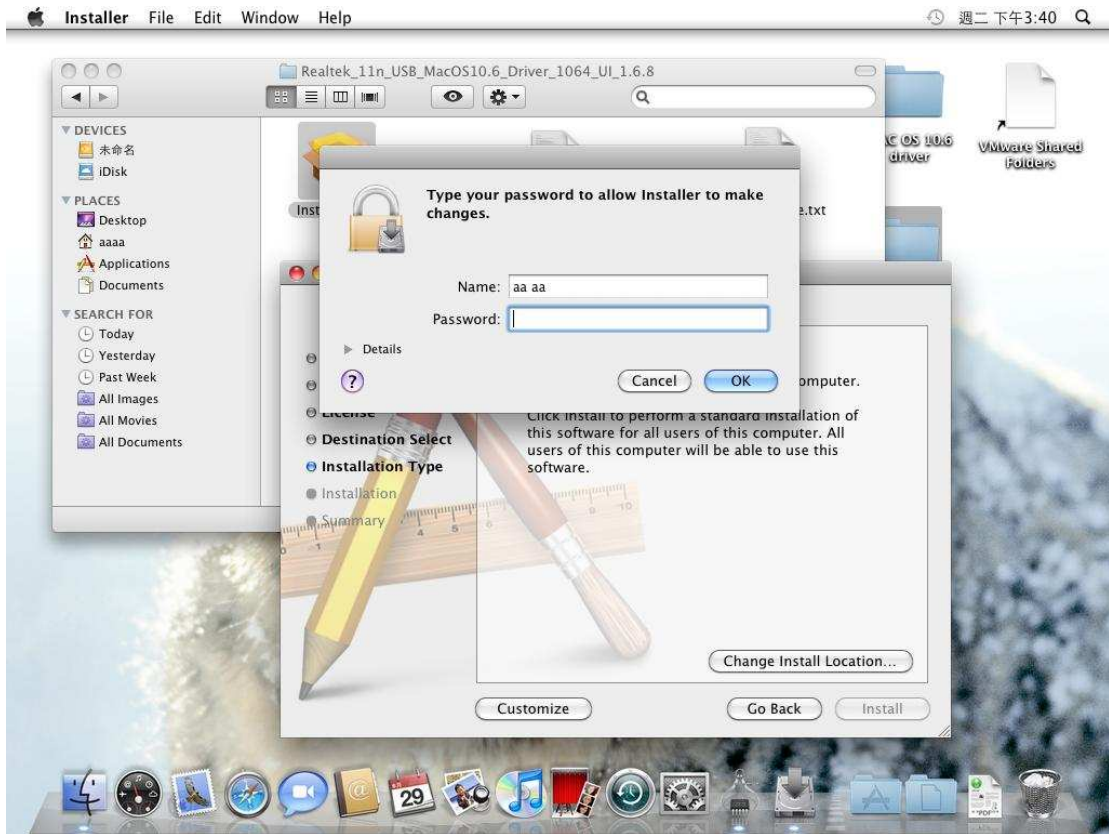

## Step 7:

Click “Install” button.

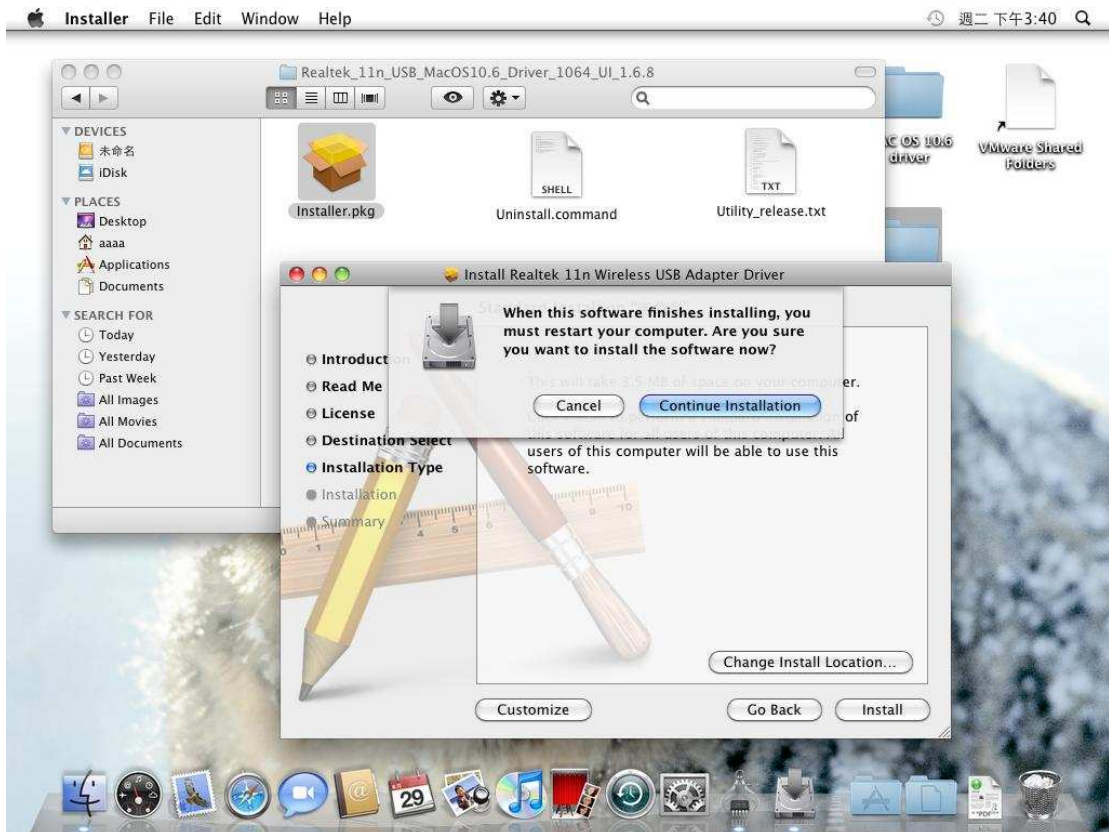

## Step 8:

Fill your name and password, then click “OK” button.

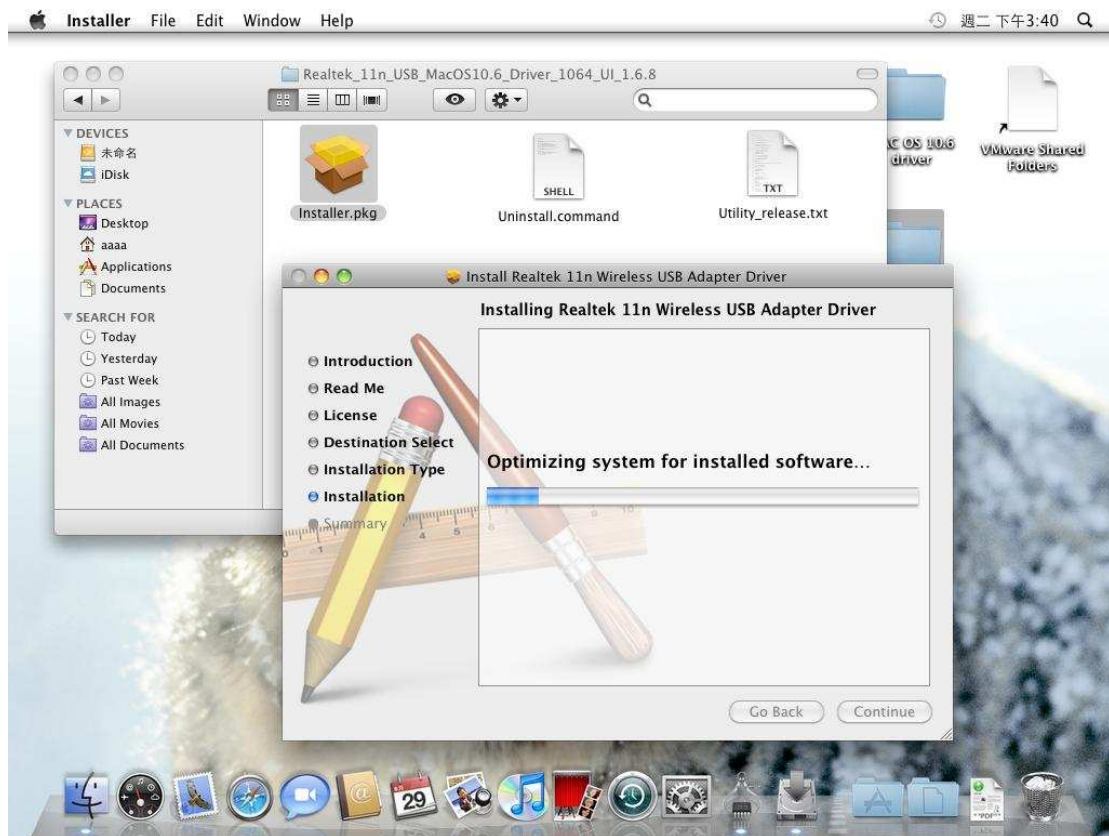

**Step 9:**  
**Click “Continue Installation” button.**

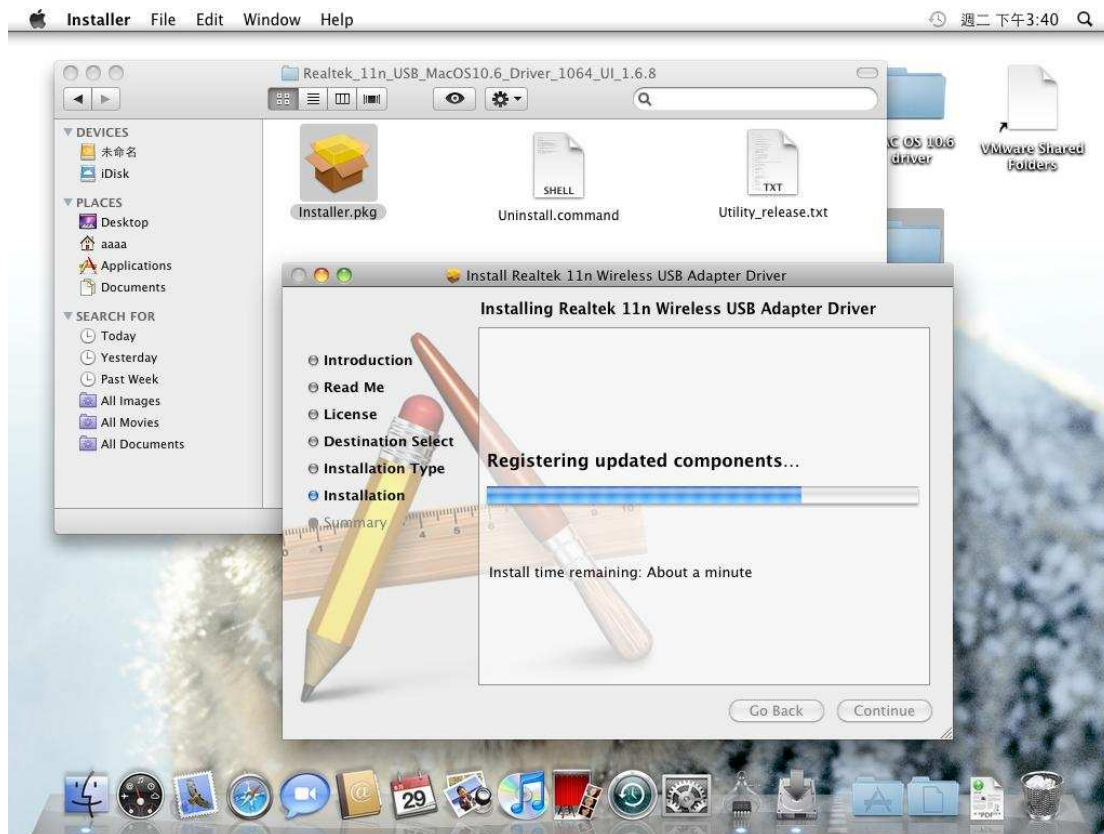

## Step 10:

It will start to install wireless driver.

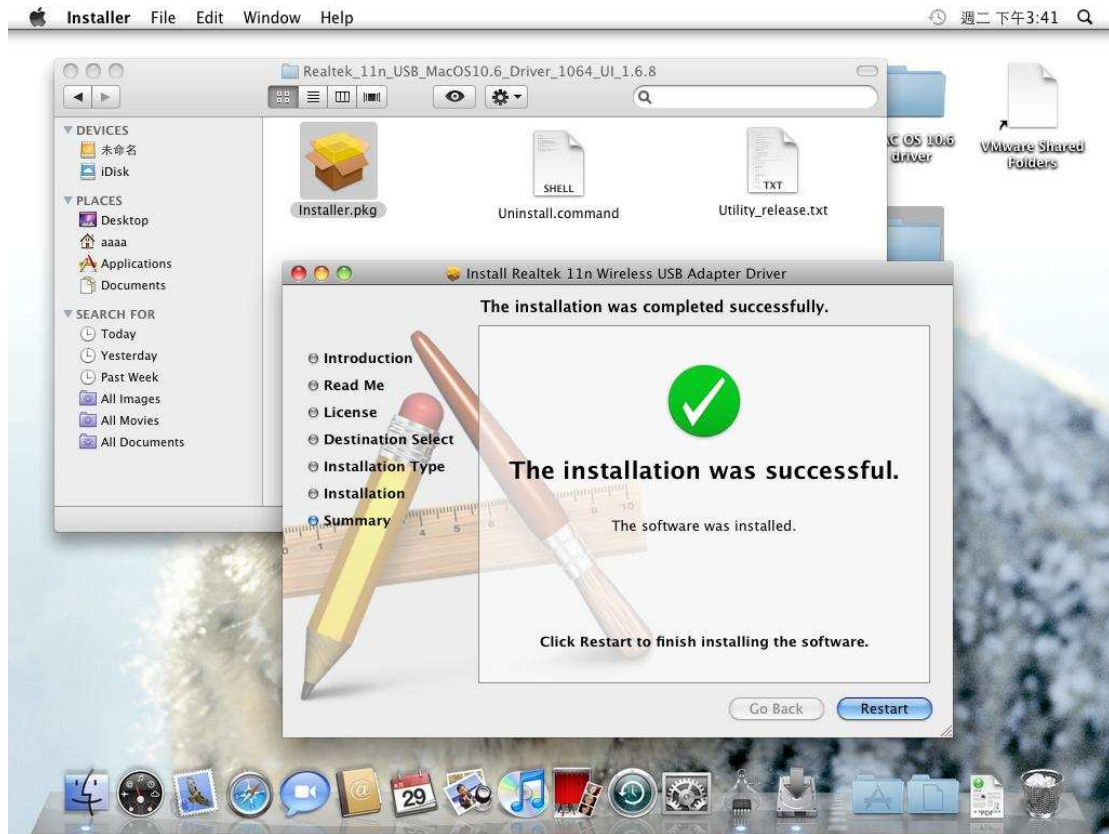

## Step 11:

Wait until driver is installed completely.

## Step 12:

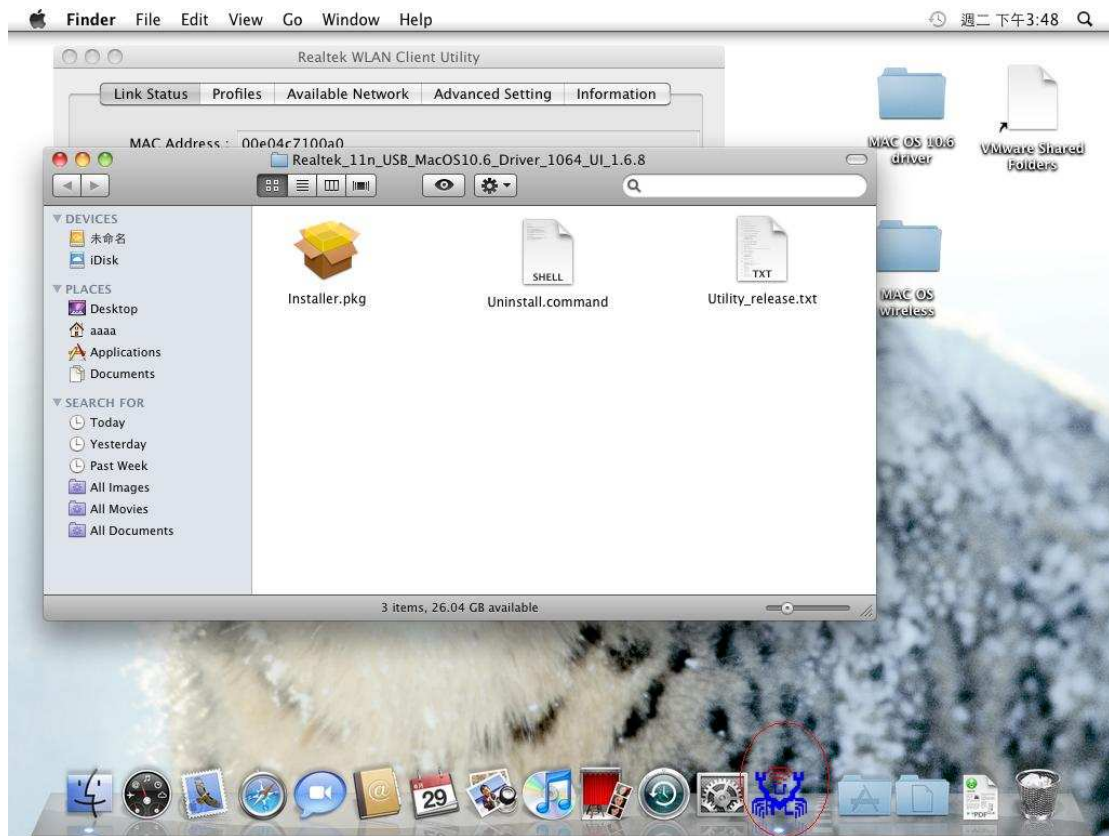

When installation is successful, please click “Restart” button to restart your system.

### Step 13:

After computer is restarted, the driver is installed.

You will find a crab is jumping in the function shortcut column.

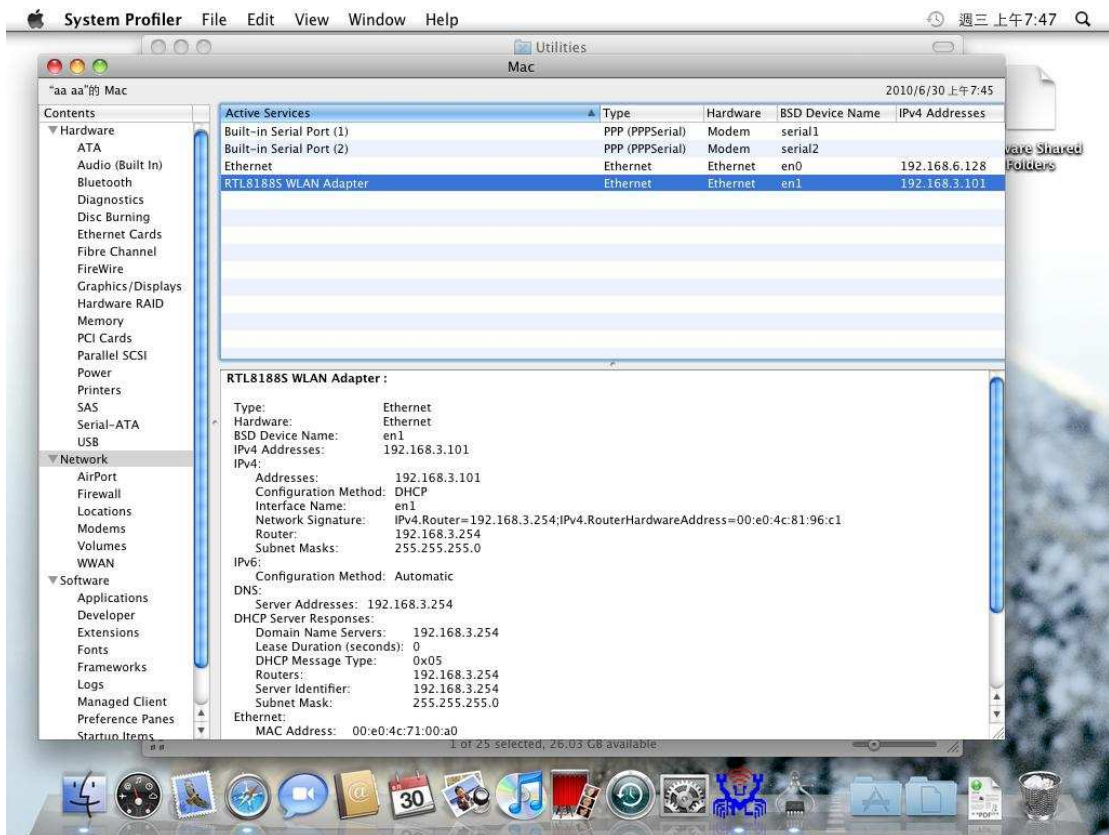

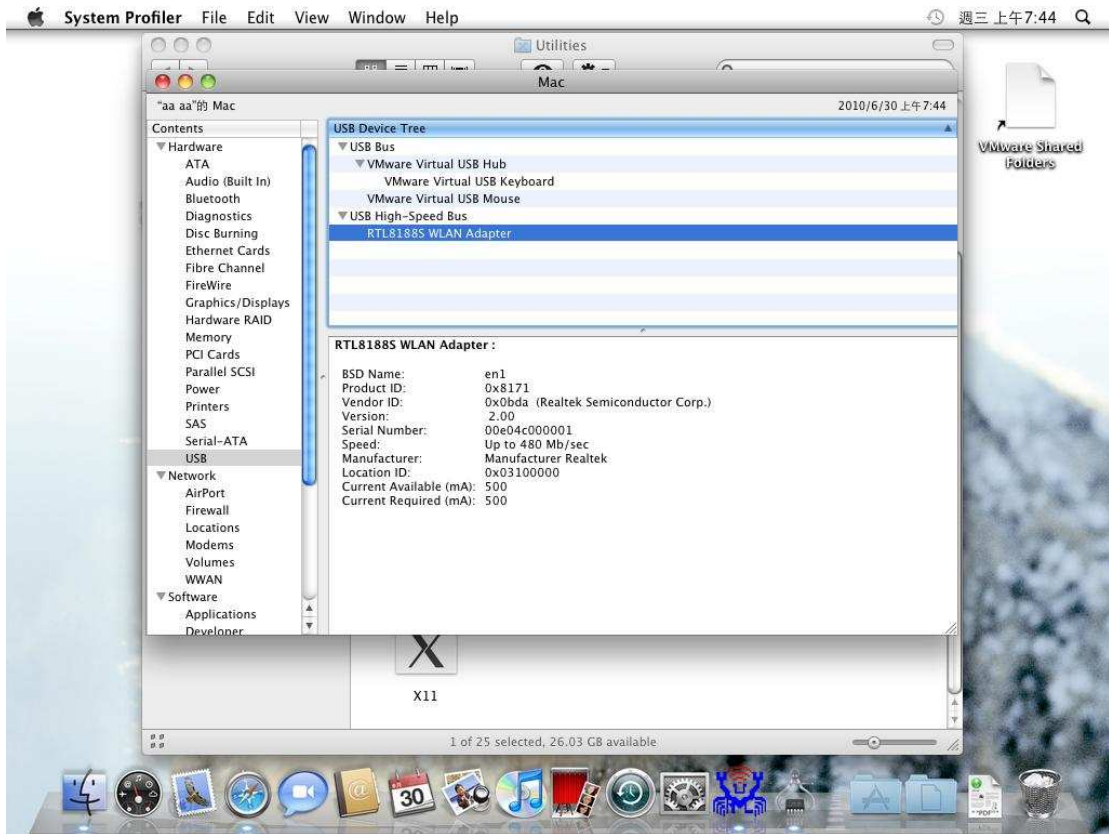

## Step 14:

Open your Network setting, you will find the “RTL8188su wireless USB Adapter” option.

### Step 15:

Open your Mac Device setting, you will find “RTL8188S WLAN Adapter” on USB and Network description.

## Step 16:

We will try to use wireless to connect internet.

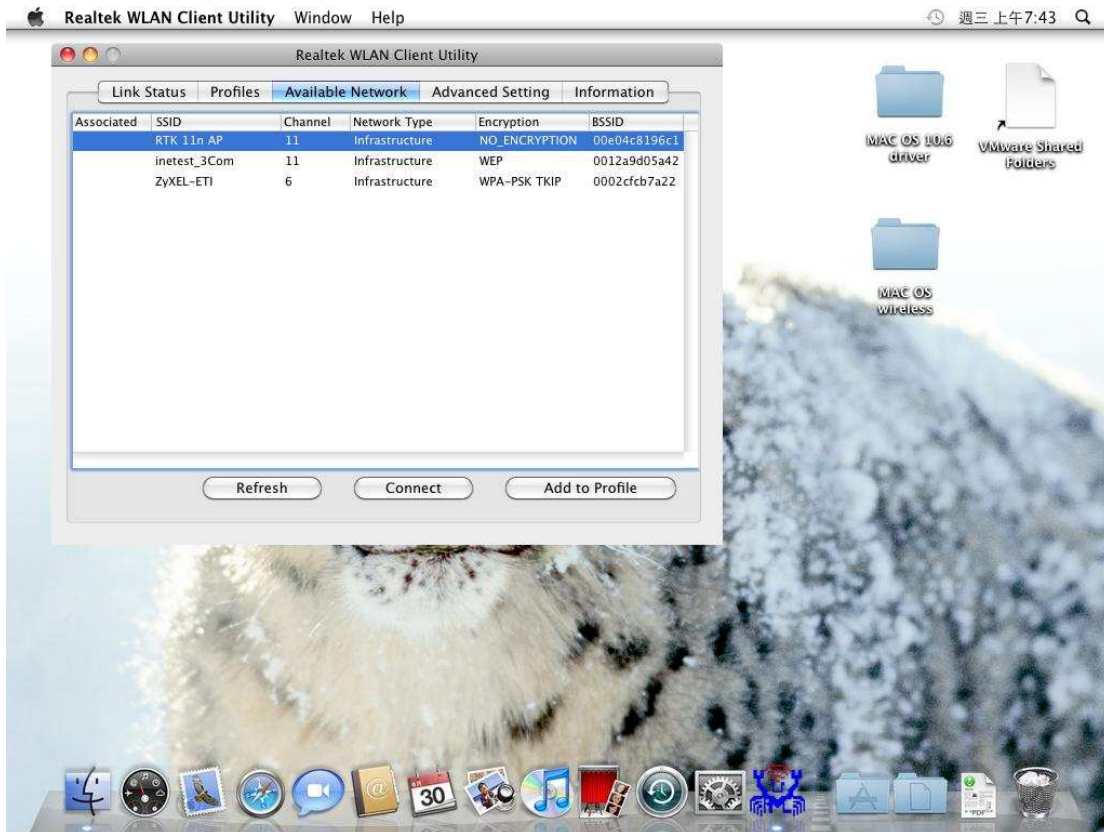

Click the crab icon, and the “Realtek WLAN Client Utility” GUI will display.

## Step 17:

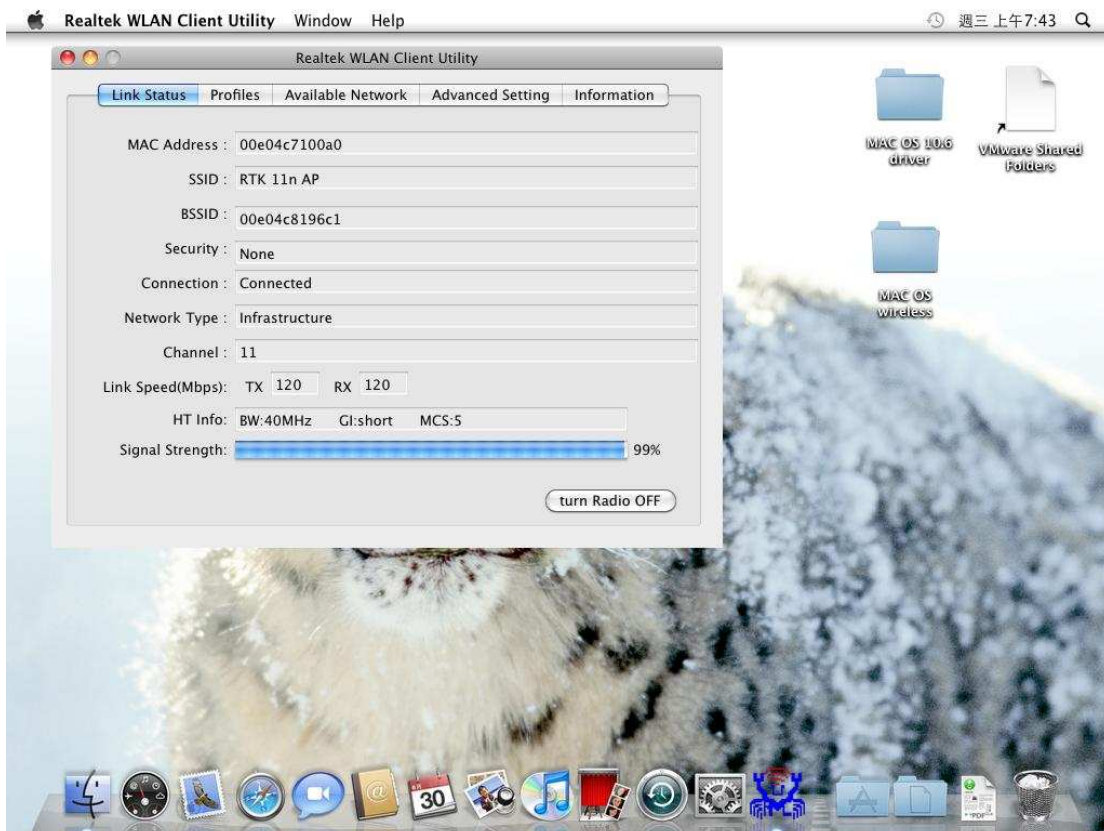

Switch to “Available Network” tab, and click the “Refresh” button to search the wireless AP.

Select and connect to your available wireless AP.

## Step 18:

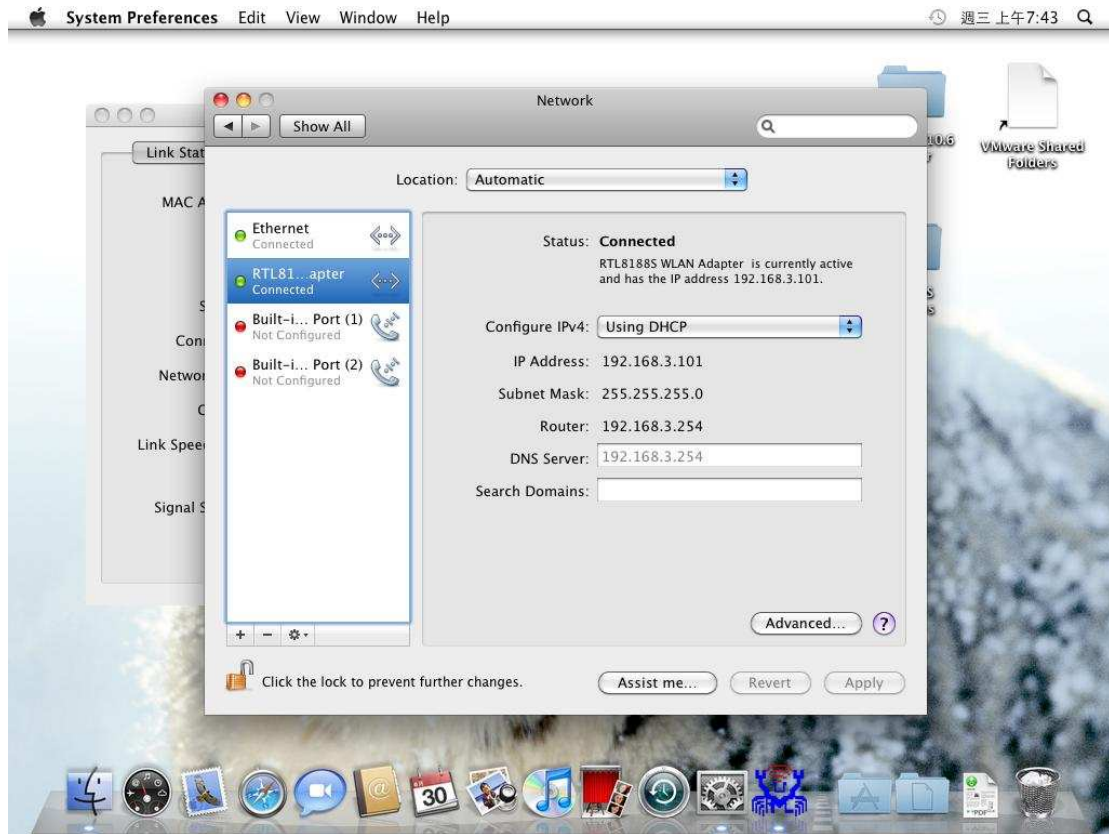

When connection is finished, you will find the “Link Status” information.

## Step 19:

Open your “Network” setting to see if the setting is OK.

Then click the “Apply” button to use wireless network.
